Descriptors-*Institutions, *Surveys, *Teacher Certification, Teacher Education
Identifiers-AACTE, American Association Colleges Teacher Education

Teacher certification data from September 1966 to September 1967 received by the American Association of Colleges for Teacher Education from 969 member and nonmember institutions are reported in part 1 of this document. The categories include undergraduates who completed requirements for initial certification in kindergarten, elementary school, junior high school, high school, and special education; potential new teachers initially certified in Master of Arts in Teaching programs; and recipients of master's degrees, six-year degrees, and doctor's degrees in education. Part 2 contains state totals fot these institutions which are grouped by regions; and part 3 lists the "major producers" of certified teachers and advanced degree recipients and those institutions with 75 percent or more of their graduates eligible for certification. (SM)

THE AMERICAN ASSOCIATION OF COLLEGES FOR TEACHER EDUCATION

The AACTE is a national voluntary association of collegiate institutions organized to improve the quality of institutional programs of teacher education. Its present membership includes all types of four-year institutions for higher education: private and church-related liberal arts colleges, state colleges and universities, private and church-related universities, and municipal colleges and universities. Within the varied teacher education programs offered, only one uniform theme dominates the AACTE: the dedication to constantly improving quality in the education of teachers.

FOREWORD

Annually The American Association of Colleges for Teacher Education receives information from its member institutions and from nonmember institutions known to be preparing teachers regarding their enrollments, the kinds of programs they offer, and the number of degrees awarded during the previous academic year and summer sessions. For this year, the AACTE report form has been modified in order to facilitate the reporting of expanding programs in teacher education and to refine the categorization of initially-certified teachers. Thus, the information received, and eventually reported, by AACTE encourages a multi-faceted analysis of teacher productivity in higher education.

This year's summary of institutional reports from the period September 1, 1966, through September 1, 1967, presents in detail the following information: (a) the number of undergraduates who completed requirements for initial certification in the areas of kindergarten, elementary school education, junior high school education, high school education, and special education; (b) the number of potential new teachers initially certified in Master of Arts in Teaching programs (or their equivalent); and (c) the number of master's degrees, sixth-year degrees, and doctor's degrees in the field of education.

Report forms were received from 969 institutions of higher education. This figure includes returns from 773 AACTE member institutions and 196 nonmember institutions. Data from individual institutions (member and nonmember) are reported by states in Part I of the report. State totals for both member and nonmember institutions are grouped by regions and are reported in Part II of the report. Part III lists a portion of the member institutions which appropriately might be called "major producers" of initially certified teachers and of advanced degree recipients. It also lists those institutions which devote the major part of their programs to the preparation of teachers.

Because the initially-certified teacher is the primary focus of this report, totals for data pertaining to initial certification always are given in the shaded column of the report form. This makes it possible to see rapidly the total "teacher productivity" of a given institution, state, or region. These totals include the figures given for the areas of the undergraduate program, for the Master of Arts in Teaching program, and for other master's degree recipients eligible for initial certification. However, these figures, when totaled, may sometimes be larger or smaller than the total given in the shaded column. In the first instance, the difference may be attributed to the fact that some teachers are certified in more than one area; in the second, to the fact that other programs leading to initial certification are offered by an institution but are not included as part of the data requested on the report.

Information showing the size of the teacher education program in relation to the size of the student body has been added to this report. A dash in that column, or in the column reporting the size of

the student body, indicates information not given by the reporting institution. The 1967 report has also been expanded to give more detailed information on master's degree programs. Column 13 shows separately both the figures for Master of Arts in Teaching programs and for other master's degree programs leading to initial certification. The MAT figure is always reported in the upper part of the box for an institution; the other figure is always reported in the lower part of the same box. Totals for that column are also separated; readers will sometimes find two figures in the box and sometimes only one shown either in the upper or the lower part.

It is hoped that this teacher productivity report will provide information which may be used and analyzed by persons interested in the production of teachers for our schools and colleges. It is hoped that both member and nonmember institutions will continue to be instrumental in increasing the quantity, while improving the quality, of this production.

Edward C. Pomeroy
Executive Secretary

November 1968
